STACK

Product
TypeScript · React · Next.js · Vite · Node.js · NestJS · Python · REST · GraphQL

Data
PostgreSQL · Prisma · SQL · MongoDB · Snowplow · Snowflake

AI & Agents
Agentic workflows · RAG · Pinecone · Claude API · AWS Bedrock · Evals · Claude Code · Cursor

Infra
AWS · AWS CDK · Docker · GitHub Actions · CI/CD · Vercel · Webflow

Product craft
A/B testing (VWO) · Analytics instrumentation · Performance · Accessibility (WCAG) · Design systems

EDUCATION

Software Engineering
Universidad ORT Montevideo

LANGUAGES

Spanish · Native
English · Advanced / Professional

OUTSIDE OF WORK

Running (medal in the photo), tennis, volleyball, playing the guitar, cooking, reading.

Jesús Aguiar

Product Engineer · Engineering Manager

I build products end to end, and lately, the agents that help build them.

Profile

Full-stack engineer with 8+ years shipping production software, currently an Engineering Manager who gets into the mud. I've taken products from zero to one as a founder, and spent the last few years owning features on live platforms used across 1,500+ studios in 24 countries: from data model and API to UI, instrumentation, and the A/B test that proves it worked. Most recently I've been building things agents actually use: a production RAG pipeline consumed programmatically, and an agentic SDLC workflow that changed how my teams ship. I care about the details users feel, and I measure whether they mattered.

Experience

Engineering Manager · Outliant

Sep 2025 – Present · Remote

Global digital product agency. Clients include Orangetheory Fitness, Barry's, Anytime Fitness, Perspire Sauna Studio, and The Broken Yolk Cafe.

- Built a production RAG pipeline: given a sales brief, an agent retrieves relevant past work from a Pinecone vector store, reasons over it, and returns a structured proposal. Owned retrieval strategy, prompt architecture, and the API surface. It is consumed programmatically, not through a chat box.
- Designed an agentic SDLC workflow for my teams: per-flow skills that load documented product context, run a "grill-me" clarification session with the engineer, produce a techspec for human approval, enforce branching and model-selection guardrails, and hand off to review. Engineers stay accountable for every decision.
- Lead 5–6 concurrent product teams while staying hands-on in architecture, code review, and production incidents.
- Introduced a Backstage-based project bootstrap system, increasing new-project setup speed by 25%.
- Rolled out SOPs, Git standards, and the Techspec framework org-wide, cutting hotfixes and improving cross-team communication by 40%.

Tech Lead & Senior Full-Stack Engineer · Outliant

Feb 2024 – Sep 2025

- Consolidated two legacy Orangetheory platforms into one unified CMS architecture: mapped both data models, designed the migration path, and cut over a live product used across 1,500+ studios without breaking it.
- Built an analytics event pipeline from scratch (Snowplow + Snowflake + AWS) whose data drove a 20% Q4 2024 revenue increase.
- Ran the A/B testing program (VWO) across core conversion flows: +30% engagement and sales in 3 months.
- Built a shared React + Webflow component library used across Purpose Brands (Orangetheory, Anytime Fitness), reducing build and QA time.
- Led the JavaScript to TypeScript migration with unit testing, and raised accessibility coverage by 70%.
- Rebuilt Barry's, Anytime Fitness, Perspire, and The Broken Yolk Cafe on Webflow with CMS architectures marketing can run without engineering.

Senior Full-Stack Engineer · Outliant

Aug 2023 – Feb 2024

- Shipped Apply Promo end to end (data model, API, React UI, tests): +60% campaign conversions.

- Removed steps from payment flows based on analytics and UX review: +25% conversions in one month.
- Took Lighthouse scores from 50–60% to 80–99% across Performance, Accessibility, and SEO.

Founder & CTO · Lograf Design & eCommerce
Mar 2020 – Mar 2023

- Built and sold my own eCommerce product from zero: Node.js, PostgreSQL, React, MercadoPago and delivery integrations. Running in 30+ live stores, lifting client sales by up to 80%.
- Grew the agency's design and eCommerce brand to 50k+ social followers; cut client hosting costs by 95%.

Lead Frontend Engineer · Serraform Streaming
Nov 2022 – May 2023

- Led a 4-person team shipping a web3 streaming rental app for Decentraland in 5 months: Polygon smart contracts, wallet UX, Livepeer streams.

Full-Stack Engineer · SpaceDEV
Sep 2018 – Mar 2020

- Built a private chat and document-sharing app for doctors collaborating on shared patients.
- Built an AI-assisted social media analytics dashboard; improved the SomosUY mobile app experience.

How I build

- **Ship small, measure, iterate.** Every feature I own gets instrumentation and, where it matters, an experiment. If I can't tell whether it worked, it isn't done.
- **AI with a human in the loop.** Agents do the heavy lifting; engineers own the decisions. If someone can't explain how their code was built, the process failed.
- **Write it down.** Techspecs, flow docs, and PR templates are how small teams move fast without stepping on each other.
- **Sweat the details users feel.** Performance, accessibility, and fewer steps in a checkout flow show up directly in conversion numbers.
